Subject: If monopoly in any Industry (in this case IT Industry) is using its power

If monopoly in any Industry (in this case IT Industry) is using its power illegally to protect itself against innovations that could threaten its power, then finally the IT Industry itself is going to be affected. So if today USA is still keeping its world leading position in that Industry, it is unlikely that it'll be possible to save this position in a long term without breaking down such a monopoly.

Thanks,
